

# WAMP/XAMPP is responding very slow over localhost

Asked 11 years, 3 months ago Modified 2 months ago Viewed 315k times

138

127.0.0.1 localhost

127.0.0.1 localhost

It was perfectly working fine before, but I do not know what happened and why it has started acting strange lately, since even a reformat didn't fix it.

[php](#) [apache](#) [xampp](#) [localhost](#) [wamp](#)

- 4 I have also the same issue. The issue was with Apache's main settings file httpd.conf. See this link for a solution that worked for me: [serverfault.com/questions/66347/...](#) – Jitendra Dec 8, 2011 at 14:39

I added `LoadModule php5_module "C:/xampp/php/php5apache2_2.dll"` on httpd.conf and restarted it but it didn't help at all. – FBwall Dec 8, 2011 at 14:46

Hmm, do you have a fresh install of xampp or do you have any frameworks running? Also you dont need this line `127.0.0.1 localhost` in the hosts file twice so try taking one out – cows Dec 8, 2011 at 16:18

the problem got fixed, i did nothing. It just suddenly responded fast again after a couple of days. Sigh. – FBwall Dec 11, 2011 at 10:29

@all, I have a question for those that proposed solutions that involve adding or replacing text with `127.0.0.1` : what happens if you access `127.0.0.2` , or `127.1.2.3` or some other loopback address? For example, if MySQL is bound to `127.0.0.2` , will hard-coding `127.0.0.1` in the Apache conf files still work? – Synetech Nov 19, 2013 at 21:28

I had the same problem running on Windows 8 running on 64bit. Apache is really slow but
